From ancient times to Technology

Luiz Gamito¹

Abstract

The knowledge about human mind comes from Philosophy to Science through Psychiatry and Neurosciences. Last decades brought to us a marvellous new world of Technologies of Information and Communication (TIC), nowadays each more used on the diagnostic and treatment of mental diseases and dysfunctions.

Virtual Reality is a good example about the possible linkage between the pathways of Technologies and Psychiatry in order to improve progress in Medicine.

The author, according his self experience, introduces some principles of cyberdiagnose and cybertherapy and discuss concepts around clinical practice.
